HOW TO INCREASE SOCIAL IMPACT OF YOUR TEACHING: USING LOUIS COMPETENCE FRAMEWORK TO IMPROVE YOUR COURSE

This **Blended Intensive Program** organised by Palacký University in Olomouc demonstrates how the LOUIS tool (which is part of Aurora Competences Framework) can increase the impact of existing courses on the development of **students' general academic and personal competences**.

It guides and assists participating teachers to identify the general competences best fitting in their courses and to clearly **identify learning outcomes** that they and their students understand intuitively. It uses examples of existing **LOUIS-adapted courses** from Aurora universities to show that the LOUIS tool is easy to use in practice, doesn't require time-consuming preparation and that **skills development** does not reduce development of substantive knowledge.

The program also presents a simple **tool for assessing the improvement of competences** of students and getting feedback on how they appreciate the implementation of LOUIS tool.
