

## BizHub - Configuration on Mac OS X (10.6 or newer)

1. Download and Install the driver from the Institute website (Service > Print)
2. Create a new Printer in the System Preferences' Printer Pane
3. (The symbol might not be there yet. In this case right-click the toolbar, choose „Customize toolbar...“ and drag it into the toolbar.) Select the „Advanced“-tab and enter the information shown below

(once you entered the IP address, the other fields except „Name“ will be populated automatically)

4. In the printing dialog itself you must enter your credentials (5-digit number) as below

You may save this setting to avoid having to type your password every time you want to print something.
